<https://www.icann.org/en/blogs/details/update-icanns-emergency-internet-infrastructure-support-initiative-28-03-2022-en>

2 March 2022

Mykhailo Fedorov  
Deputy Prime Minister, Minister of Digital Transformation  
Ukraine

Dear Deputy Prime Minister,

I am writing in response to your letter received 28 February 2022. First, let me express my personal concern for the well-being of your citizens in the midst of this conflict. ICANN and its global community are aware of and concerned about the terrible toll being exacted against your country.

You have asked that ICANN target Russia's access to the Internet by revoking specific country-code top-level domains operated from within Russia, arranging the revocation of SSL certificates issued within those domains, and shutting down a subset of root servers located in Russia.

ICANN is an independent technical organization that manages the Internet's unique identifiers. ICANN is a facilitator of the security, stability, and resiliency of these identifiers with the objective of a single, global, interoperable Internet. In our role as the technical coordinator of unique identifiers for the Internet, we take actions to ensure that the workings of the Internet are not politicized, and we have no sanction-levying authority. Essentially, ICANN has been built to ensure that the Internet works, not for its coordination role to be used to stop it from working.

## Update: ICANN's Emergency Internet Infrastructure Support Initiative

28 March 2022

By [Göran Marby](#)

In addition to the U.N. six languages, this content is also available in: [Українською](#)

I am pleased to update you on the status of the financial support that the Internet Corporation for Assigned Names and Numbers (ICANN) will be contributing for continued access to the Internet in crisis situations. In a [resolution](#) taken 6 March 2022, the ICANN Board directed the ICANN organization (org) to develop a proposal for the distribution of financial assistance to support the security, stability, and resiliency of the Internet's unique identifier systems, specifically where access to Internet infrastructure is jeopardized by sudden, unexpected events beyond the control of the affected users.

The first distribution of funds will be focused on Ukraine. The org is working on a plan to

## In-person Meetings Planned for Los Angeles Revert to Virtual as COVID Cases Rise

23 April 2022

By [Maarten Botterman](#)

Next week the ICANN Board of Directors is convening for our second Board Workshop of 2022. It had been planned as our first face-to-face meeting since January of 2020. In addition to this meeting, the Supporting Organization and Advisory Committee (SO/AC) chairs have been working with ICANN Org to hold an in-person Roundtable session three days before the workshop.

These meetings were planned to be held in Los Angeles. However, in the past few days, COVID cases in Los Angeles County have risen significantly, and as a result the Centers for Disease Control (CDC) increased its risk rating for community transmission of COVID to High. We rely on the CDC risk ratings for our decision-making. We also reviewed estimates of the trajectory of this latest surge over the coming weeks and all factual information available.

The Board discussed the rising cases, the change in the CDC risk level, the trajectory, and the
